A Brighter Future: Exploring the Role of Brentuximab vedotin in Pediatric Hodgkin's Lymphoma

Session Date: 01/02/2024

Session Time: 11:00 – 11:45 AM (CST)

Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including pharmacists, RNs, APRNs, PAs, MDs.

Activity Overview

Pediatric Hodgkin's lymphoma treatment is complex and involves multiple cytotoxic chemotherapy agents, as well as radiation for certain individuals. Establishing the balance between treatment efficacy and avoidance of long-term toxicities is of utmost importance in the pediatric population as the 5-year overall survival is greater than 98% among pediatric patients. The 2023 National Comprehensive Cancer Network guideline on pediatric Hodgkin's lymphoma added the brentuximab vedotin-containing regimen BV-AVE-PC to the category 1 recommendations for the primary treatment of high-risk pediatric classical Hodgkin's lymphoma. This presentation will review the literature surrounding brentuximab vedotin, illustrating its path to approval in the frontline treatment of pediatric classical Hodgkin's lymphoma.

Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Discuss the prominent long-term toxicities associated with pediatric Hodgkin's lymphoma treatment
2. Describe the mechanism of action and adverse effect profile of brentuximab vedotin
3. Evaluate the literature supporting the use of brentuximab vedotin in the primary treatment of high-risk pediatric Hodgkin's lymphoma
